

VCFcache reduces runtime for both VEP and fastVEP

Exactly paired genomes, variants and cache blueprints · comparison draft

A

Caching helps both annotators

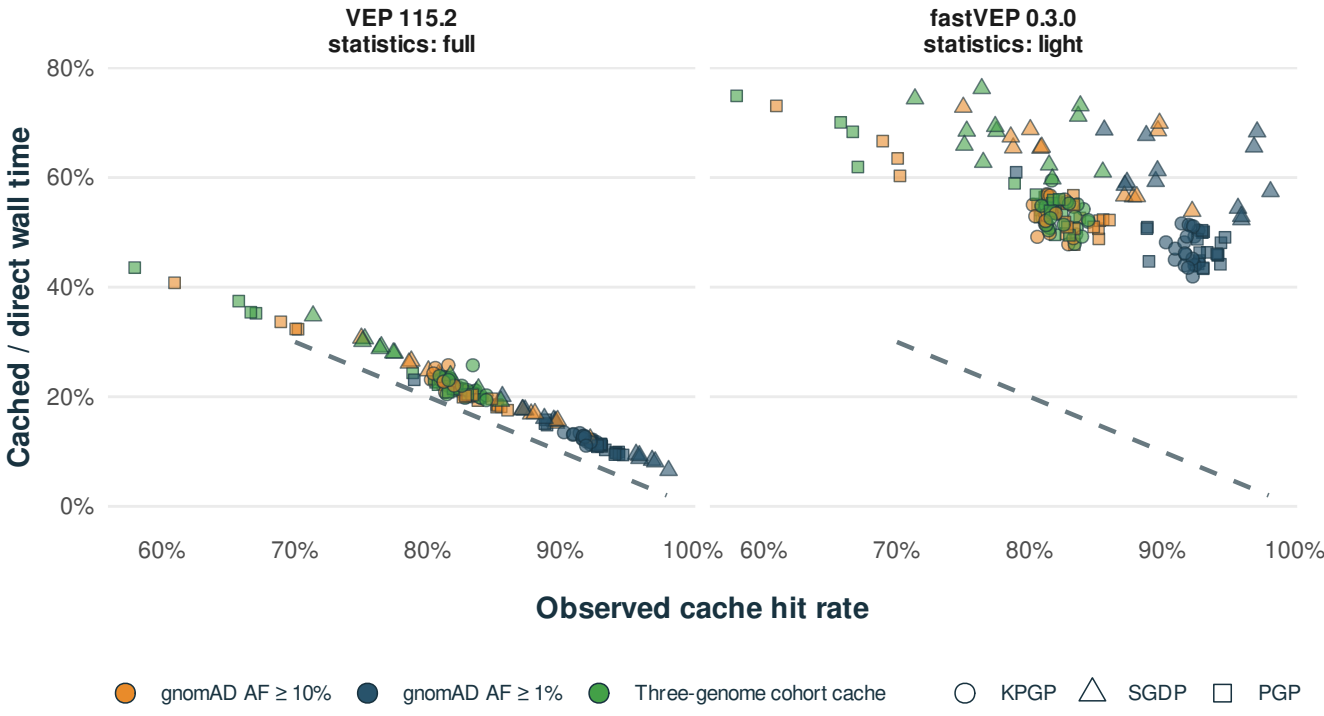

Large points: stratified median with 95% bootstrap interval; small symbols: cohort medians

B

The same hits remove more work from the slower pipeline

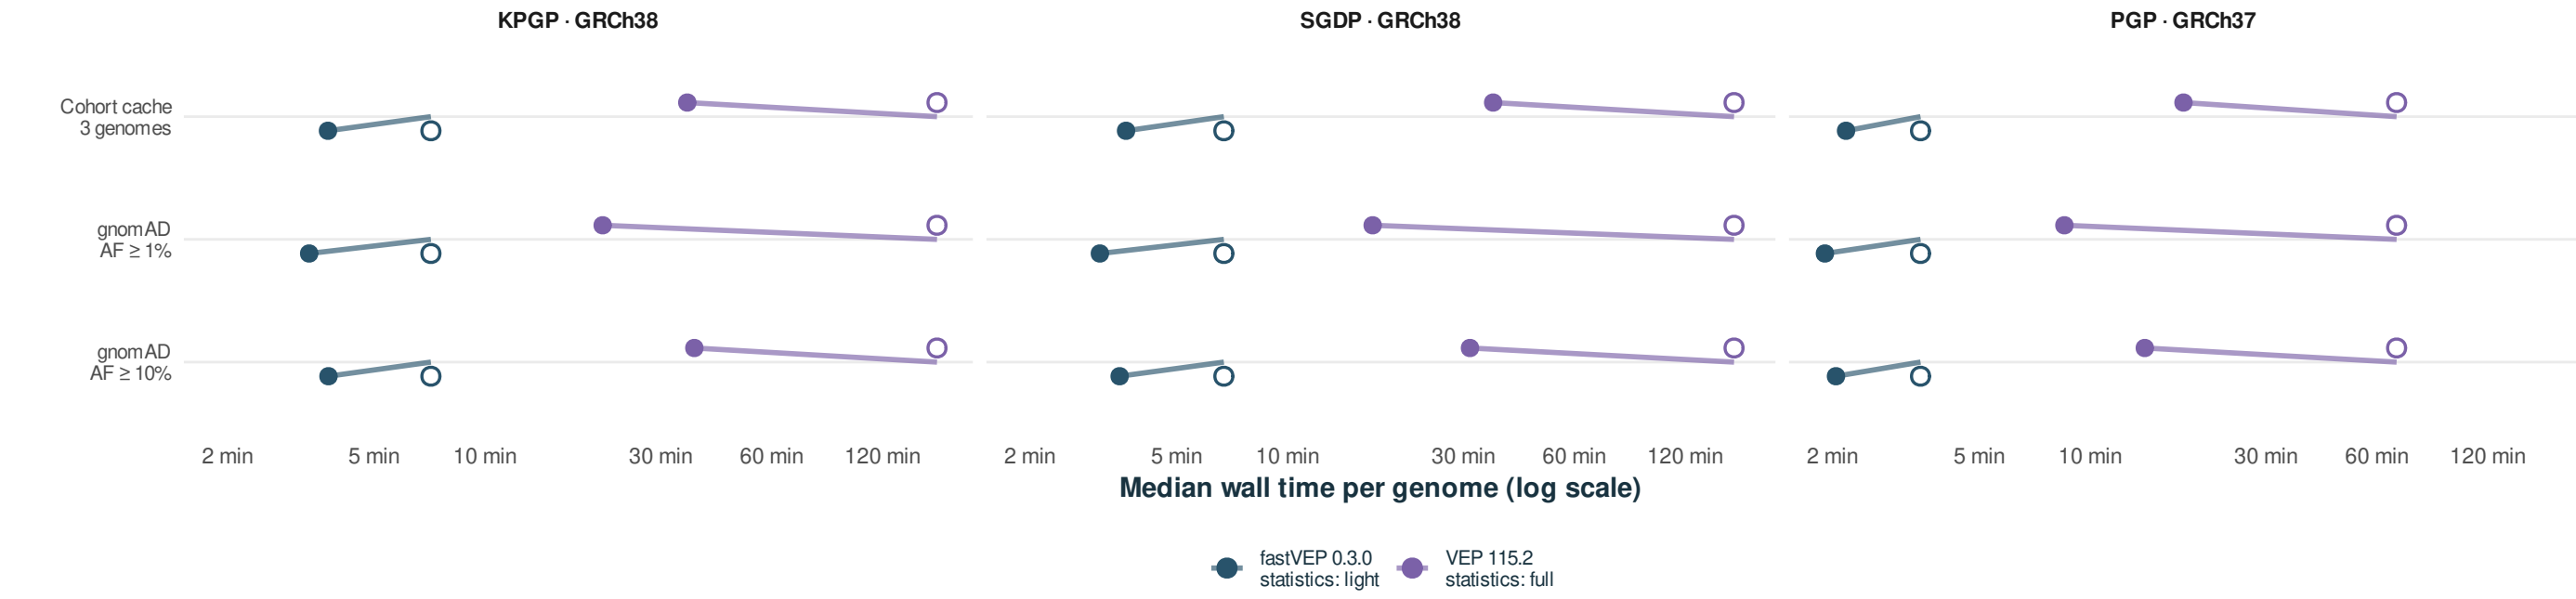

Dashed line: zero-overhead miss-fraction rule; axes are identical

C

Absolute wall time spans minutes to hours

Open point: direct; filled point: cached; line: time returned per genome

PROVISIONAL CROSS-ANNOTATOR VIEW: VEP 115.2 was timed with --statistics full; fastVEP 0.3.0 with --statistics light. The standalone fastVEP results are final. Replace the VEP timings after the six-genome light-statistics calibration is complete. Each genome/tool/strategy combination was run once; genomes, stratified by cohort, are the inferential units.
