

More reuse means less waiting—whatever your pipeline

Choose the column closest to your samples; bigger numbers are better

Slower pipeline
(VEP-like overhead)

1.9×
54% time left

4.2×
24% time left

7.1×
14% time left

11.1×
9% time left

Very fast pipeline
(fastVEP-like overhead)

1.1×
88% time left

1.7×
58% time left

2.1×
48% time left

2.3×
43% time left

Distant WGS
50% hits

Related WGS
80% hits

WES
90% hits

Very high reuse
95% hits

Illustrative runtime model using median overhead measured in 52 real WGS genomes.
Actual speedup depends on your cache hit rate and annotation pipeline. Cache build cost excluded.
