

Bundled cache coverage determines how much pipeline time returns

One 4.80-million-variant real WGS · matched direct baselines · bundled Zenodo caches · light statistics · no technical repeats

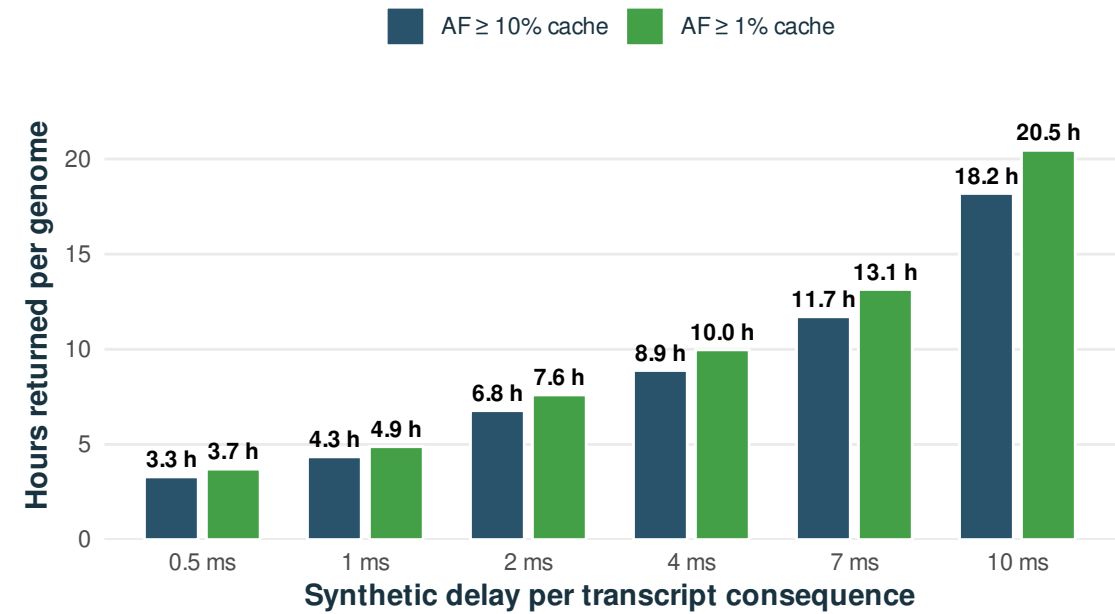

A More cache coverage removes more waiting

Measured share of direct wall time remaining

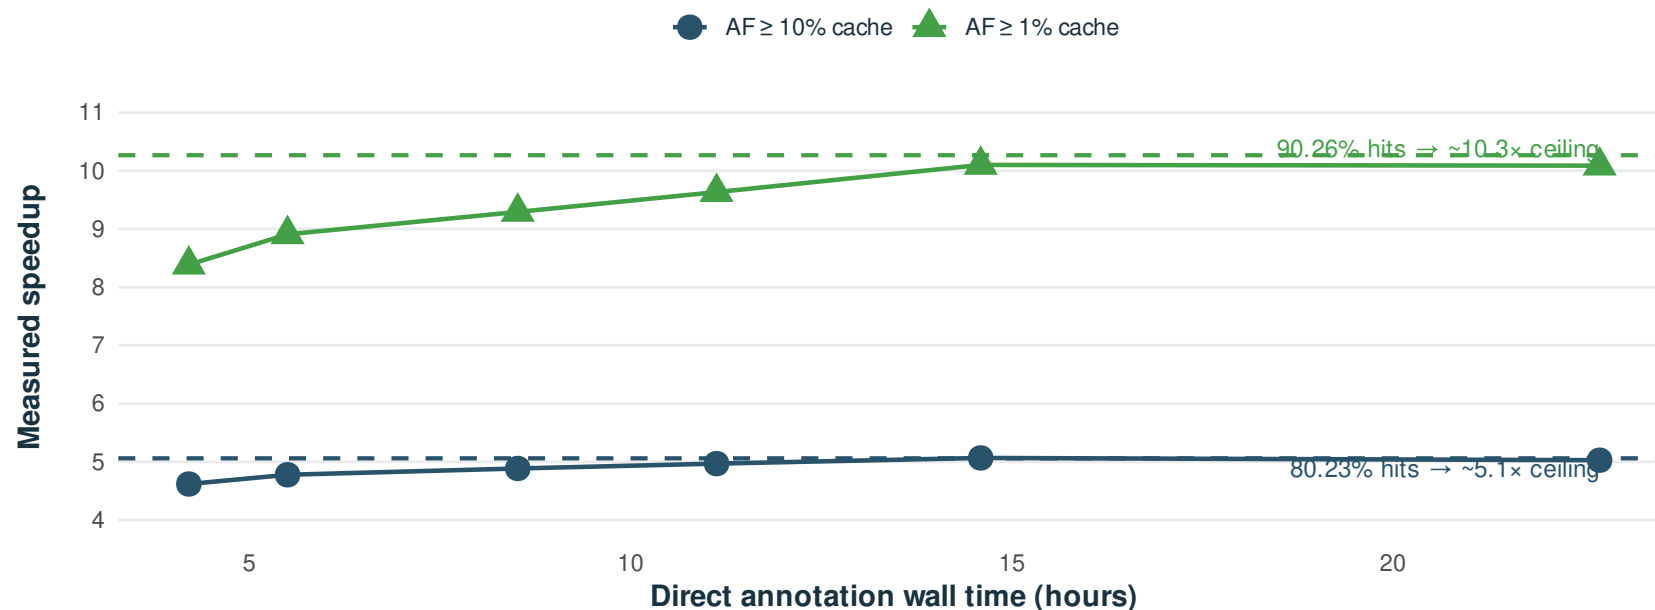

B Absolute savings grow with pipeline cost

Up to 20.5 hours returned for one real WGS

C Speedup approaches the hit-rate ceiling

The larger bundled cache nearly doubles the slow-pipeline ceiling

D Model agreement

Prediction versus measurement
